LINT ERRORS

1. Pure Code Daily Blackboard Section

FEATURE

TodayBlackboardCard Component

CustomerHomeClientView.tsx

Problem: The home screen previously relied on a static placeholder image (`/home_card_blackboard.png`).

Delivered Solution: Engineered a 100% pure code chalkboard component with zero external asset dependencies:

- Styled with slate chalk texture, fine chalk dust borders, and SVG decorative heart icon (`♥`).
- Loaded Google handwritten font **Caveat** for natural artisanal cafe handwriting.
- Fully responsive with live daily specials ("Ratnagiri Estate Pour Over with warm hazelnut notes").

2. Universal Theme Engine (Light & Dark Mode Toggle)

FEATURE

ThemeToggle & Real-Time Event Sync

components/common/ThemeToggle.tsx

Created an interactive, cross-portal Theme Toggle with seamless persistence and real-time broadcast:

- **State Persistence:** Mode is saved in `localStorage: smol_theme` ("day" / "night").
- **Zero-Reload Sync:** Dispatches `smol_theme_changed` custom event so all open tabs and windows sync theme instantly.
- **Dual Curated Palettes:**
 - *Daylight Crème (Light):* Warm Crème (`#F3E7D3`), Card Biscuit (`#FAF4EB`), Espresso Ink text (`#241F1C`), Cherry Red accent (`#B72E35`).
 - *Midnight Espresso (Dark):* Deep Ink canvas (`#141211` / `#1C1917`), Stone borders, Gold highlights (`#F2C84B`).

3. Kitchen Display System (KDS) Theme Migration

PORTAL

KDS Light & Dark Mode Overhaul

/kitchen

- **KitchenBoardView.tsx:** Added ThemeToggle button to top navigation bar. Transformed all 4 Kanban columns (*New Orders, Preparing, Ready, Completed*) to adapt seamlessly to Light and Dark modes.
- **KitchenTicketCard.tsx:** Adjusted ticket container colors, elapsed timers, item customizations, and action buttons (`Start Prep` , `Mark Ready` , `Serve`) for high contrast and readability.

- **StaffLoginGate.tsx:** Added ThemeToggle and light mode card styling to kitchen security gate.

4. Cashier View Feature & Contrast Fixes

PORTAL

Cashier Dashboard Light Mode & POS

/cashier

- Header Theme Integration:** ThemeToggle button added to sticky header with live sync indicator.
- Awaiting Verification Badge Contrast Fix:** Fixed yellow-on-pink badge into high-contrast cherry red badge (`text-[#B72E35]` `bg-[#B72E35]/10` in daylight, butter yellow in dark mode).
- Tab 1 (Queue):** Order verification tickets, PIN handshake modal, and empty queue state updated.
- Tab 2 (Tables & Settlement):** 12 dining tables grid, bill requested badges, walk-in opening buttons, and Cash Settlement drawer with instant change calculator.
- Tab 3 (Paid Orders & Audit):** Transaction audit log table and digital chit receipt viewer adapted for light & dark modes.

5. Admin Control Tower Full Light Mode Migration

FIX

Admin Tower Hardcoded Dark Classes Removed

/admin

Previously, switching to light mode left the admin dashboard with jarring dark blocks. Fixed all 10 tabs and components:

1. **12 Tables Floor Map:** Converted T-01 to T-12 cards to warm biscuit styling with JSON Tag and QR buttons.

2. **Menu Catalog (59 Items):** Stock toggle table adapted to light cream with clean hover states.

3. **Smol Club Loyalty:** Tier cards (Seedling, Regular, Smol Insider) restyled.

4. **Staff RBAC Table:** Access permissions and role PINs now clear and legible in daylight.

5. **Payments Ledger:** Settlements audit log with payment method tags (GPay, PhonePe, Cash).

6. **Analytics Suite:** Hourly orders chart, revenue curve, and table utilization matrix.

- AdminLoginGate.tsx:** Added ThemeToggle and dual-theme authentication screen (PIN: `8888`).

6. System Flow Architecture Documentation (PDF)

DOCS

System Architecture & Workflow Manual

Smol_Cafe_System_Flow.pdf

Authored and compiled a publication-grade PDF documenting the entire end-to-end flow of the smol café application: Customer dining journey, Cashier verification queue, Kitchen KDS Kanban dispatch, and Admin control operations.

7. Quality Assurance & Verification

- ✅ **Zero Lint Errors:** Ran Next.js linter (`npm run lint`) with 0 errors across the entire codebase.
- ✅ **Browser Subagent Testing:** Visually verified Light and Dark modes on Customer Home, Kitchen KDS, Cashier Desk, and Admin Tower.

-  **Responsive Compatibility:** Verified touch targets, mobile drawers, and desktop wide-screen views.
